Government Technology Opportunity in the 21st Century, Commissioner

SIIA, Software Division, Board Member

SIIA, Public Sector Innovation Group, Board Member

Open Source Election Technology Foundation, Board Member

California Civic Innovation Project, Advisor

Open Technology Fund, Advisor

X-Lab, Advisor

Open Source for America, Founder

Military Open Source Working Group, Founder

opensource.com, Editor, Government Channel

Projects

"Open Source in the US Government", an interactive timeline of every major event and software release in US Government history.

"Dave and Gunnar Show" a weekly podcast on open source, privacy, and government.

Experience

Red Hat: *Chief Strategist, US Public Sector* **2010-2014**

Set direction for sales and product teams in the US Federal, state, and local markets for a $1.5 billion open source technology business, contributing to an average of 20% growth YoY. Assisted account executives with their account planning, advising them on industry trends and their customer's needs. Also responsible for the company's relationship with CIOs, CTOs, and senior IT staff. Regularly briefed them on current technology trends and Red Hat's future plans.

Created and operated the Advocate Program, working with 13 product lines across 5 business units to ensure they complied with government rules and standards. This program connected senior technical sales staff and product management directly, which rationalized and simplified a chaotic process for data calls, issue escalation, and feature requests.

Founded Open Source for America, a national advocacy network promoting the use of open source in the US government. The group claims over 60 corporate members, and remains a resource for open source companies seeking advice of government regulations, as well as government agencies eager to adopt more open source projects.

Established, with other senior staff, a Global Government team that syndicated the success of the US group to other countries with training, shared resources, and common marketing material.

Red Hat: *Lead Architect, US Public Sector* **2006-2010**
Managed a team of 12 systems architects delivering 20% growth for 16 consecutive quarters.
Worked closely with product and engineering teams to make sure they met the governments' needs.
Coordinated sales, marketing, and engineering staff to create formal responses to government procurements.
Represented Red Hat with executive-level customers and in the media.

Core Services: *Director, Research and Development* **2005-2006**
Responsible for all internal development projects at an Oracle Applications service provider. Led a team

of developers, administrators, and engineers across many departments.

Jodie Lane Project: *Founder and Executive Director* **2004-2005**
Managed a coalition of community groups to respond to safety problems in New York's electrical system.

Five Points Consulting: *Managing Partner* **2003-2005**
Business and technical consultant to small- and medium-sized
not-for-profit organizations.

Company of the Far Countries: *Vice President, Technology* **1999-2002**
Managed development and operations for an online giftware wholesaler.

Trilux: *Senior Developer* **1996-1999**
Developed, produced, and maintained web sites for diverse set of clients.
